1. Login/Register Flow
2. Steps: ○ Open the app
3. ○ Click on "Login" or "Register"
4. ○ Enter details ○ Verify (if required) ○ Redirect to the home screen

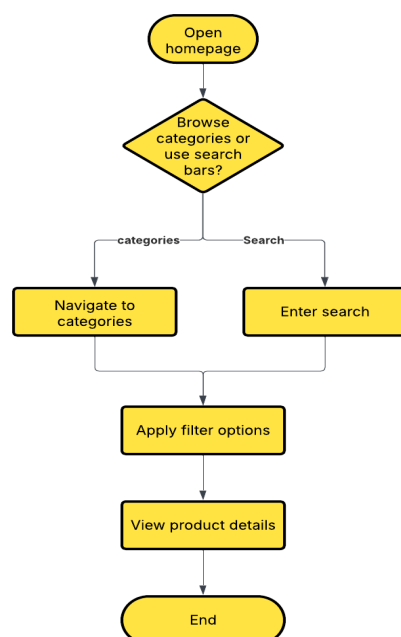

When a user opens the app, they are given the choice to either log in or register. If they choose to log in, they enter their credentials. If they opt to register, they provide their

details. Depending on the system's security settings, verification (such as an OTP or email confirmation) may be required. If verification is needed, the user must complete it before proceeding. Once all steps are successfully completed, they are redirected to the home screen, ready to explore the app.

Browse and Search Flow

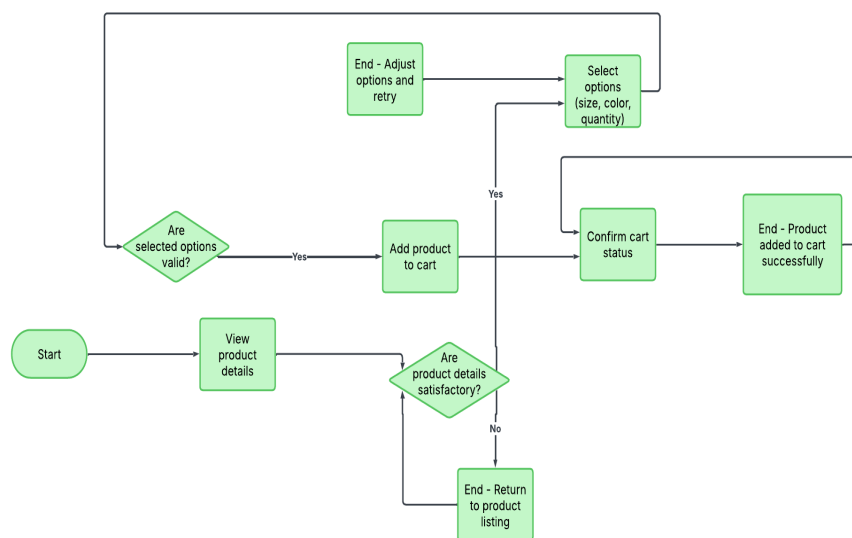

- Steps: ○ Navigate to categories or use search bar
- Apply filters/sorting options
- View product details

Browse and Search Flow Description:

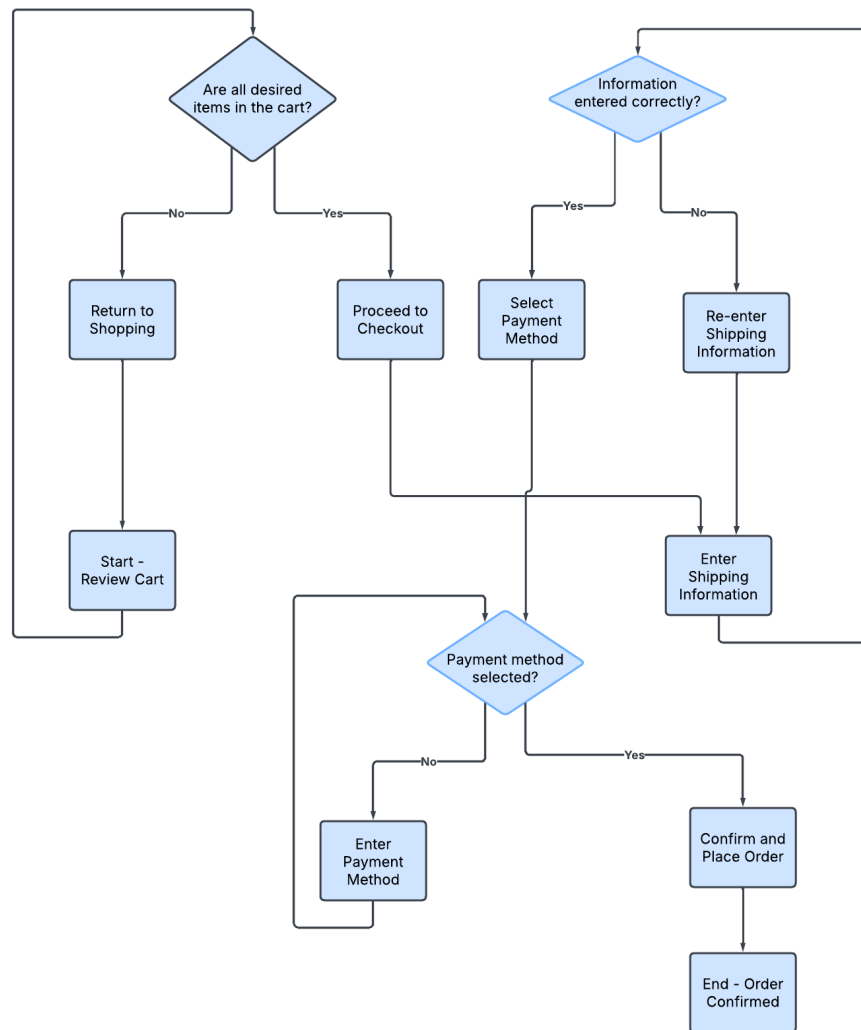

When a user lands on the homepage, they can either browse through product categories or use the search bar to find specific items. If they choose to browse, they navigate through different categories. If they opt to search, they enter

a keyword to find relevant results. To refine their choices, they can apply filters or sorting options. Once they find a product of interest, they can view its details before making a decision. This process ensures a seamless shopping experience.

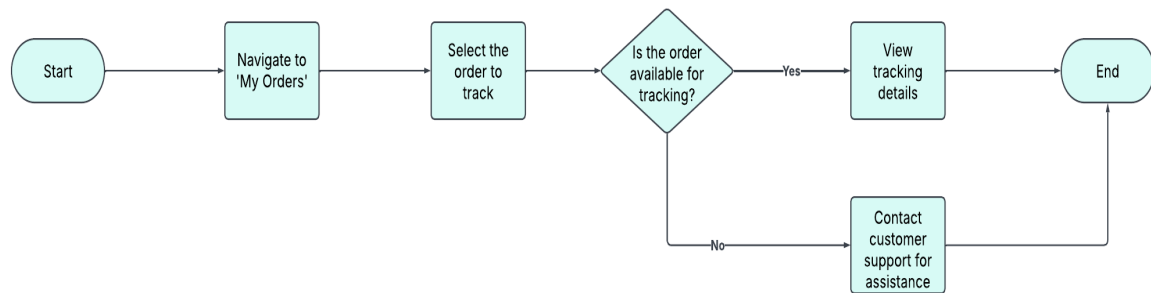

Add to Cart Flow Description:

The user starts by viewing the product details to ensure it meets their needs. They then select options such as size, color, and quantity. If the selected options are valid, they proceed to add the product to the cart. If not, they adjust their choices and retry. Before finalizing, they confirm whether the product details are satisfactory—if yes, they proceed with the cart status confirmation, successfully adding the item to their cart. If not, they return to the product listing to explore other options.

Checkout Flow Description:

The user begins by reviewing their cart to ensure all desired items are included. If any items are missing, they return to shopping. Once satisfied, they proceed to checkout. The next step is verifying shipping information—if incorrect, they must re-enter it. After confirming the shipping details, they select a payment method. If no method is chosen, they enter payment details. Finally, the user confirms and places the order, successfully completing the purchase.

Order Tracking Flow Description:

The user begins by navigating to the "My Orders" section to find their past purchases. They select the specific order they wish to track. If tracking details are available, they can view real-time updates on the order's status and location. If tracking is unavailable, they are guided to contact customer support for further assistance. This ensures users stay informed about their orders and receive help if needed, making the process seamless and efficient.
